

DevFlow

App Flow Document — SPA Frontend

v1.0 · May 2026 · All Pages, Sections & User Flows

Scope: V1 Public Beta (Q4 2026)

Platform: Web SPA — Desktop-first, mobile responsive

Audience: Engineering, Design

SPA Route Structure Overview

Route Map

Route	Page / View
/login	Login page
/signup	Signup / register
/onboarding	Onboarding wizard (new users)
/	Home — workspace dashboard (redirect after login)
/dashboard	Workspace-level dashboard
/projects/:id	Project home — Kanban (default view)
/projects/:id?view=list	Project — List view
/projects/:id?view=timeline	Project — Timeline view
/projects/:id/task/:taskId	Task detail drawer / modal
/projects/:id/sprint	Sprint planning page
/projects/:id/analytics	Project analytics
/projects/:id/github	GitHub integration panel
/chat	Workspace chat — channels + DMs
/chat/:channelId	Specific channel or DM thread
/analytics	Workspace-wide analytics
/settings/workspace	Workspace settings
/settings/profile	User profile & preferences
/settings/integrations	Integrations (GitHub, Telegram, Discord)
/settings/billing	Billing & plan management
/upgrade	Upgrade / pricing page

Persistent Layout Shell (All Authenticated Routes)

The root layout renders once and persists across all SPA route changes. It contains: Global Sidebar Nav · Top Header Bar · AI Search Overlay · Notification Tray · Real-time WebSocket connection.

Left Sidebar	Top Header Bar
--------------	----------------

- DevFlow logo + workspace name
- Project list (collapsible)
- Chat icon with unread badge
- Analytics icon
- AI Search trigger (🔍)
- Bottom: User avatar, settings

- Breadcrumb: Workspace > Project > View
- View switcher (Kanban / List / Timeline)
- Sprint selector dropdown
- + New Task button
- Notification bell + tray
- User avatar menu

1 — Auth Pages (Public Routes)

1.1 Login [/login]

Sections • DevFlow logo + tagline • Email + password form • OAuth: GitHub login button • OAuth: Google login button • Forgot password link • No account? → Signup link	Behaviour • JWT stored in httpOnly cookie • Redirect to last protected route • Form validation inline • Loading spinner on submit • Error toast on failed auth
---	---

1.2 Signup [/signup]

Sections • Name, email, password fields • Team / workspace name field • OAuth: GitHub, Google • Terms acceptance checkbox • Already have account? → Login	Behaviour • 14-day Pro trial auto-activated on signup • No credit card required • Creates workspace + first project stub • Redirects to /onboarding on success
--	---

1.3 Forgot Password [/forgot-password]

Sections • Email input • Send reset link button • Back to login link	Behaviour • Email sent confirmation screen • Reset token link via email → /reset-password • Token expiry: 1 hour
---	---

Auth User Flow

Land on /login	Enter credentials or OAuth	New user?	→ /onboarding	→ /dashboard
----------------	----------------------------	-----------	---------------	--------------

□ 2 — Onboarding Wizard [/onboarding]

Multi-step wizard shown once to new users. Progress saved per step — user can refresh and resume. Skippable from Step 3 onward.

Steps

Step	Content
Step 1 — Workspace	Set workspace name, upload logo (optional), select timezone
Step 2 — Invite Team	Enter email addresses, assign roles (Admin / Member). Skip allowed.
Step 3 — Create Project	Name first project, set description, choose color/icon
Step 4 — Connect GitHub	OAuth GitHub App install, select org/repo to link. Skip allowed.
Step 5 — Configure AI	Enable/disable AI standup bot, set standup time & timezone
Step 6 — Done	Confetti animation, CTA to open the Kanban board

Onboarding Flow

Workspace	Invite Team	Create Project	Connect GitHub	Configure AI	Open Board
-----------	-------------	----------------	----------------	--------------	------------

3 — Workspace Dashboard [/dashboard]

First screen after login for returning users. Workspace-level overview — not project-specific.

My Tasks Widget • Tasks assigned to me across all projects • Grouped: Overdue / Due Today / Upcoming • Quick status change inline • Click → Task Detail drawer AI Risk Alerts • Predictive deadline alerts • Bottleneck warnings • Suggested actions per alert • Dismiss or act from card	Sprint Status Widget • Active sprint per project • % completion progress bar • Days remaining • AI risk score badge GitHub Activity Feed • Recent PRs across all projects • Commit activity timeline • PR status badges • Link to task
Team Activity Feed • Recent task updates by all members • Chat highlights • AI standup summary link • Timestamp + actor avatars	Quick Actions Bar • + New Task • + New Project • Open AI Search (🔍) • Start Sprint Planning

Custom Dashboard (Pro Feature)

Available Widgets • Sprint Burndown chart • Open PRs count • Risk Radar • Workload Heatmap • Recent Chat Activity • Task Velocity	Customization • Drag-and-drop widget placement • Add / remove widgets • Save layouts per project • Share layout with team • Export to PDF / PNG
--	--

❏ 4 — Project: Kanban Board [/projects/:id]

Default view when entering a project. Kanban-first; view switcher in header changes to List or Timeline.

Board Columns

- To Do / In Progress / In Review / Done (default)
- Custom column creation
- Color label per column
- Column task count badge
- Collapse column toggle

Board Controls

- Drag-and-drop across columns
- Bulk-select tasks (checkbox)
- Bulk move to column
- Swimlane toggle: by assignee or priority
- Filter bar: assignee, label, priority, date

Task Cards (on board)

- Task title
- Assignee avatar
- Priority badge (Low/Med/High/Critical)
- GitHub PR status badge
- Due date + overdue highlight
- AI risk flag indicator

Board Header

- Sprint name + date range
- Sprint progress bar
- View switcher (Kanban/List/Timeline)
- + New Task button
- Sprint actions: Close Sprint, Edit Sprint

4.1 List View [/projects/:id?view=list]

Sections

- Table with sortable columns
- Columns: Title, Status, Assignee, Priority, Due Date, Labels, PR Status
- Inline edit: click any cell to edit
- Row expand for sub-tasks

Controls

- Sort by any column
- Multi-filter panel
- Group by: Assignee / Priority / Label
- Bulk-select rows → bulk actions
- Column show/hide toggle

4.2 Timeline View [/projects/:id?view=timeline]

Sections

- Gantt-style horizontal timeline
- Task bars: start → due date
- Milestones markers
- Dependency lines between tasks
- Sprint boundaries overlay

Controls

- Zoom: Day / Week / Month
- Drag to reschedule task bar
- Assignee swimlanes toggle
- Today marker line
- Export as PNG

Opens as a right-side drawer over the board (no full page reload). URL updates for deep-linking and sharing.

Header Area • Task ID (TASK-001) • Title (editable inline) • Status dropdown • Priority selector • Assignee avatar picker • Due date picker • Label tags	Description • Rich text editor (Markdown) • Bold, italic, code blocks • Link insertion • Image paste • @ mention team members
Sub-tasks • Add sub-task inline • Checkbox completion per sub-task • Sub-task count in parent • Re-order sub-tasks • Individual assignee per sub-task	GitHub Panel • Linked PRs with status badge • Branch name with copy button • Commit history timeline • AI PR Summary (pinned) • Link to GitHub PR directly
Comments • Threaded comment list • @ mentions • Emoji reactions • Edit / delete own comments • AI PR summary pinned at top	Activity Log • All field changes timestamped • GitHub events (PR opened/merged) • AI actions logged • Status transitions history • Comment additions

Task Detail User Interactions

Click task card	Drawer opens	Edit fields	Add comment / sub-task	View GitHub PR	Close drawer
-----------------	--------------	-------------	------------------------	----------------	--------------

Sprint Header • Sprint name + goal field • Start date / End date pickers • Sprint duration (weeks) • Status: Planning / Active / Closed • Create Sprint / Edit Sprint	Backlog Panel (left) • All unassigned tasks • Search + filter backlog • Priority sort • Drag task → sprint • Create task from backlog
Sprint Panel (right) • Tasks in active sprint • Total estimated hours • Per-member hour allocation • Capacity bar per member • Remove task → back to backlog	AI Planning Assist • AI analyzes team capacity • Flags over-allocated members • Recommends backlog tasks to add • Sprint completion likelihood % • Suggested redistribution actions

Sprint Flow

Create Sprint	Add tasks from backlog	AI capacity check	Adjust assignments	Start Sprint	Active Kanban
---------------	------------------------	-------------------	--------------------	--------------	---------------

Sprint Close Flow

Close Sprint	Move incomplete tasks	AI retro report	Next sprint / backlog
--------------	-----------------------	-----------------	-----------------------

7 — Team Chat [/chat] [/chat/:channelId]

Real-time embedded chat — not a third-party tab. Renders in a full-page split layout.

Left Panel — Channel List • Workspace general channel • Per-project channels (auto-created) • Direct Messages list • Online presence indicators • Unread message badges • + New Channel button • Mute channel option	Center — Message Thread • Chronological message list • WebSocket real-time updates • Typing indicators • Message grouping by sender • Day separators • Scroll to bottom button
Message Input • Rich text input bar • @ mention autocomplete • Emoji picker • File / image attachment • Code snippet with syntax hl • Send on Enter / Shift+Enter	Message Actions (hover) • React with emoji • Reply in thread • Copy link to message • Edit own message • Delete own message • Bookmark message
Thread View (right panel) • Threaded replies sidebar • Original message at top • Reply input at bottom • Collapse thread • Link thread to task	AI Standup Bot • Posts daily at set time (default 9 AM) • Per-member: done / today / blockers • Member can edit before post • Weekly Friday rollup • Posted to project channel

Task Linking in Chat

Paste any TASK-ID in a message → auto-unfurls into a rich preview card showing: Title · Status · Assignee · Priority · Due Date. Click to open Task Detail.

Workload Heatmap • Grid: members (rows) × sprint days (cols) • Color: green / yellow / red by load • Hover cell → task list tooltip • Click overloaded cell → reassign flow • Sprint selector dropdown	Developer Metrics • Tasks completed per sprint • Avg task resolution time • PR review turnaround time • Streak: consecutive on-time sprints • Personal view default; lead sees aggregate
Risk & Deadline • Per-task risk score: Low/Med/High/Critical • Factors: age, time elapsed, PR status • Updated every 6 hours • Sprint health widget • Drill-down from badge to task	Sprint Burndown • Ideal vs actual burn line • Daily remaining work points • Scope change markers • Interactive hover data points • Export as PNG
GitHub Activity Report • PR throughput chart • Review turnaround per member • Commit frequency heatmap • Week-over-week trend • Filter by member or date range	Custom Dashboards (Pro) • Drag-and-drop widget grid • Available: 6 widget types • Save layout per project/user • Share layout with team • Export full dashboard as PDF / PNG

Reports Generated

Report	Description
Daily Standup Report	AI-generated, posted to project chat at configured time
Weekly Sprint Summary	Progress vs goal, risk flags, AI insights — every Friday
Sprint Retrospective	Velocity, completion rate, blockers, team load — on sprint close
GitHub Activity Report	PR throughput, review times, commit frequency per member/week

GitHub is a first-class data source — not a webhook sidebar. Integration panel surfaces live GitHub data within the project context.

Connection Panel • GitHub App OAuth install • Select org and repo to link • Connection status indicator • Disconnect / re-auth option • Webhook health status	PR Overview • All open PRs list • PR status: Open/Draft/In Review/Merged • Linked task badge on each PR • Reviewer assignees • Age of PR (days open)
Commit Timeline • Recent commits per branch • Author avatar + commit message • Link to GitHub commit • Filter by branch / author • Commit-to-task linkage Branch Conventions • Required format: devflow/TASK-ID-description • Auto-link on push to matching branch • Convention guide shown in panel • Copy branch name helper button	Issue Sync • Import GitHub issues as DevFlow tasks • Bi-directional status updates • Map GitHub labels to DevFlow labels • One-click bulk import • Sync conflict resolution AI PR Summaries • Triggered when PR → In Review • What changed + files affected • Potential concerns flagged • Suggested review focus areas • Pinned in task comment thread

10.1 Workspace Settings [/settings/workspace]

General • Workspace name + logo • Timezone setting • Delete workspace (danger zone)	Members • Member list + roles (Admin/Member) • Invite by email • Revoke access / change role • Pending invitations list
--	--

10.2 User Profile [/settings/profile]

Profile • Name, avatar upload • Email (read-only) • Change password • Linked OAuth accounts	Preferences • Theme: Light / Dark / System • Notification preferences • Standup time preference • Email digest frequency
--	---

10.3 Integrations [/settings/integrations]

GitHub • Connect / disconnect GitHub App • Linked repos list • Re-auth if token expired Discord • DevFlow Discord App install link • /devflow setup guide • Per-project channel config • Notification type filter	Telegram • Bot setup instructions • @DevFlowBot add guide • Per-project channel mapping • Notification type filter V2 (Planned) • Slack workspace app • Figma design link • Vercel / Railway deploy link • Jira import tool
--	--

10.4 Billing & Plan [/settings/billing]

Plan Overview • Current plan badge (Free / Pro / Team) • Usage: members, projects, AI actions • Trial countdown (if on trial) • Upgrade CTA button	Billing • Payment method • Invoice history • Upgrade to Pro / Team • Cancel subscription • Seat count management
---	---

11 — AI Features (Embedded — No Separate Sidebar)

All 6 AI features are powered by Anthropic Claude API. They are embedded contextually in the relevant page/section — never in a separate chat sidebar.

AI Feature	How It Works + Where It Appears
AI Task Generation	Triggered from: Sprint Planning, Backlog. User pastes PRD/description → AI returns structured task list with titles, sub-tasks, priority, estimates. User reviews, edits, bulk imports.
Smart Sprint Planning	Triggered from: Sprint Planning page. AI analyzes team capacity vs estimated hours, flags over-allocation, recommends backlog tasks, shows sprint completion likelihood %.
AI Code Review Summary	Triggered when: PR linked to task + status → In Review. AI generates plain-English summary: what changed, files affected, concerns, review focus. Posted as pinned comment.
Automated Standup	Triggered: Daily at configured time (default 9 AM). Per-member: done yesterday / today's plan / blockers. Member can edit draft before post. Weekly Friday rollup included.
Predictive Risk Detection	Triggered: Continuous background monitoring. Issues alerts on dashboard when task ages, PR stalls, sprint velocity drops. Includes suggested actions (reassign / reduce scope / extend deadline).
Natural Language Search	Triggered:  global shortcut → AI Search overlay. Search across tasks, comments, PRs, chat messages. Plain English queries. Context-aware ranked results.

AI Search Overlay (Global —)

Sections • Full-screen overlay on  • Plain-text search input • AI-interpreted results grouped by type • Types: Tasks / Comments / PRs / Chat	Example Queries • 'tasks blocked by authentication' • 'what did Priya work on last sprint' • 'open PRs older than 3 days' • 'all high-priority overdue tasks'
--	--

Sections

Plan Cards • Free — \$0/forever • Pro — \$12/member/month • Team (Annual) — \$96/member/year • Feature comparison per plan • CTA: Upgrade Now / Current Plan badge	Upgrade Triggers • 3-member cap reached → banner prompt • AI usage limit hit → inline upsell • Workload heatmap locked → tooltip CTA • Custom dashboards locked → tooltip CTA • 14-day trial expiry countdown
---	--

Plan Feature Comparison

Feature	Plan Access
Members	Free: up to 3 · Pro: up to 10 · Team: unlimited
Projects	Free: 2 · Pro: unlimited · Team: unlimited
AI Actions	Free: 5/month · Pro: unlimited · Team: unlimited
GitHub Integration	All plans
Telegram & Discord	All plans
Workload Heatmap	Pro + Team only
Risk Scoring	Pro + Team only
Custom Dashboards	Pro + Team only
Priority Support	Pro + Team
SSO / Audit Logs	Team only
Advanced Permissions	Team only

□ 13 — Complete User Flows

New User Signup → First Sprint

/signup	/onboarding Step 1-6	/projects/:id (Kanban)	Sprint Planning	Start Sprint
---------	----------------------	---------------------------	-----------------	--------------

Daily Dev Workflow

Login → Dashboard	View My Tasks	Open Task Detail	Update status / comment	Check AI Standup	Chat channel
----------------------	---------------	------------------	----------------------------	---------------------	--------------

Create Task with AI

Sprint Planning	Paste PRD text	AI generates tasks	Review & edit	Bulk import to sprint
-----------------	----------------	--------------------	---------------	-----------------------

PR Review Flow

PR opened on GitHub	Auto-linked to task	Status → In Review	AI summary posted	Reviewer opens task	PR merged → Done
------------------------	------------------------	-----------------------	----------------------	------------------------	---------------------

Sprint Close & Retro

Close Sprint	Move incomplete tasks	AI retro report	View analytics	Plan next sprint
--------------	--------------------------	-----------------	----------------	------------------

Free → Pro Upgrade

Hit usage limit	Upsell trigger shown	/upgrade page	Select Pro plan	Enter payment	Pro activated
-----------------	-------------------------	---------------	-----------------	---------------	---------------

14 — Notification System

In-App Notification Tray

- Bell icon in top header
- Unread count badge
- Click → slide-in tray
- Types: task assigned, PR merged, risk alert, @mention, sprint update
- Mark all read button
- Click notification → navigate to source

External Notifications

- Telegram: @DevFlowBot in group
- Discord: dedicated channel per project
- Notification types: task changes, standup, risk alerts, PR events
- Per-project, per-channel config
- Notification type filter toggle

Notification Preferences (per user)

Notification Type	Channel & Default
@Mentions	Always on — in-app + email
Task assigned to me	In-app + optional email
PR status change (linked tasks)	In-app
Risk alerts	In-app + optional Telegram/Discord
Standup report posted	In-app + Telegram/Discord
Sprint started / closed	In-app
Quiet hours	Suppress in-app noise during set hours

DevFlow App Flow Document

v1.0 · May 2026 · Viraj, Product & Engineering

This document covers all SPA pages, sections, features, and user flows for DevFlow V1 Public Beta.
